build (3.11) Node.js 20 actions are deprecated. The following actions are running on Node.js 20 and may not work as expected: actions/checkout@v4, actions/setup-python@v3. Actions will be forced to run with Node.js 24 by default starting June 2nd, 2026. Node.js 20 will be removed from the runner on September 16th, 2026. Please check if updated versions of these actions are available that support Node.js 24. To opt into Node.js 24 now, set the FORCE_JAVASCRIPT_ACTIONS_TO_NODE24=true environment variable on the runner or in your workflow file. Once Node.js 24 becomes the default, you can temporarily opt out by setting ACTIONS_ALLOW_USE_UNSECURE_NODE_VERSION=true. For more information see: https://github.blog/changelog/2025-09-19-deprecation-of-node-20-on-github-actions-runners/

+10

To resolve the deprecation warnings in your GitHub Actions workflow, you need to **update your pinned action versions to those that support the Node.js 24 runtime**.

Recommended Version Updates

GitHub is transitioning runners to Node.js 24 as the default starting **June 2, 2026**. To fix the current warnings for the actions mentioned in your log, update your `.github/workflows/*.yml` files to the following versions: The GitHub Blog

- **actions/checkout**: Update from `v4` to **`v5`** (or at least `v4.2.2`).
- **actions/setup-python**: Update from `v3` to **`v6`** (or at least `v5.4.0`). GitHub +3

Implementation Example

Modify your workflow file to use these updated versions:

yaml

```yaml
jobs:
  build:
    runs-on: ubuntu-latest
```

ถามอะไรก็ได้

```
        with:
          python-version: '3.11'
```

ใช้โค้ดอย่างระมัดระวัง

Important Deadlines

Date	Milestone
June 2, 2026	**Forced Default**: All JavaScript actions will be forced to run on Node.js 24.
September 16, 2026	**Full Removal**: Node.js 20 will be completely removed from runners; actions still using it will fail.

Testing Node.js 24 Early

If you want to ensure your workflow is fully compatible before the deadline, you can force the use of Node.js 24 now by setting an environment variable in your workflow file: The GitHub Blog

yaml

```yaml
env:
  FORCE_JAVASCRIPT_ACTIONS_TO_NODE24: true
```

ใช้โค้ดอย่างระมัดระวัง
